The elevation of the derrick floor above sea level is **3369** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We intend to complete this well in the **Atoka (Slaughter) zone, San Andres formation** at an approximate depth of **2,000'**. We will run **8-5/8", 24#/ft.**, casing at **900'** and **5 1/2", 14#/ft.** casing at **1,900'**. Both strings of pipe will be cemented with enough cement to protect the fresh water. The **Slaughter zone** will be sand frac'd at approximately **1,600'** to **1,700'**.

Note: At the request of Mrs. Angell, grazier of surface, this location was moved **280'** south of original location to get away from stock water hole. This changed location is also over a hill south of her water hole.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
