Well No. #1 is located 660 ft. from [N] line and 660 ft. from [E] line of sec. 8  
[S] [W]  
NW NW Sec. 8 18S 27E N.E.P.M.  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
Artesia Eddy New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is \_\_\_\_\_ ft.

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Reference is made to the subsequent report of cementing 8-5/8" casing, which stated that 5 cement jobs were attempted without successfully obtaining a complete water shut-off. The original drilling program provided for 8" casing being cemented at approximately 1000' to isolate Artesian water. It was our intention to lease this casing in the hole upon complete of the well. Inasmuch as we were unable to obtain a water shut-off, we now propose to drill ahead, and if commercial production is obtained, knock off the 8" casing at approximately 859', above the Artesian water penetrated at 975', and cement 7" casing at approximately 1475' with 100 sacks of cement after circulating aquajel to surface before cementing. If circulation of aquajel is obtained, 100 sacks of cement will fill the hole about the 8" casing, and, thereby isolate Artesian water from upper zone.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company David C. Saikin et al.
