NEW MEXICO

(State or Territory)

The elevation of the derrick floor above sea level is **3414** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was drilled to approximately 1850 feet and was temporarily abandoned. It made a little oil and some gas. Recently we have tested it again and would like permission to produce it. Phillips Petroleum Company will take the gas, and we think this can be made a commercial well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
