(State or Territory)

The elevation of the derrick floor above sea level is ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Plan to drill 2,00 feet unless commercial production is discovered at a lesser depth. Plan to set 8 1/4 inch pipe at 550 to 600 feet and cement to surface. In case deeper production is encountered plan to run 7-O.D. casing from 50 to 100 feet above pay zone and circulate mud to surface and cement with 100 sacks of cement. In case production is established in the 450 to 500 foot zone will run 8 1/4 casing approximately 20 feet above the pay and cement with 25 sacks of cement preceeding mud circulated to surface. In case well is deepened below 500 foot zone will run electrical log from 8 1/4 inch casing shoe to total depth.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
