| <input type="checkbox"/> Beginning Drilling Operations | <input type="checkbox"/> Casing Test and Cement Job | <input checked="" type="checkbox"/> Other (Explain): |
| <input type="checkbox"/> Plugging | <input type="checkbox"/> Remedial Work | Plugging oil zone & converting well to fresh water. |

Detailed account of work done, nature and quantity of materials used, and results obtained.

Corrected Report

A 15 sack cement plug was spotted on bottom at 1883 feet. Hole was filled with water and a 30 sack cement plug was spotted at top of oil zone at 1843' and extended back up into casing at 1827'. An 8 sack (30 foot) cement plug was placed at 350' which is below all fresh water. 7" casing was perforated and well was tested and found to be productive of fresh water. Work was witnessed by Jim Wright of State Engineer's office in Roswell, New Mexico. This correct earlier report which showed No. 11 P to be well that was converted to fresh water. Location was cleared of junk and leveled.
