The elevation of the derrick floor above sea level is 3622 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to attempt to re-enter this plugged and abandoned well and to complete in the Grayburg formation. The well was originally drilled by Malco-Realer-Yates to 2697', P&A July 1, 1953. Western-Yates re-entered the well on January 10, 1958, and cleaned out to 2529 ft., at which point the old surface casing, 8 5/8" OD set at 457 ft. and shot off at 355 ft., shifted position and prevented further entry into the well bore. We will attempt to get through the surface casing stub and cleanout to old TD. A casing and completion program will be proposed after this is done.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
