Date

OIL CONSERVATION COMMISSION,
Santa Fe, New Mexico.

Gentlemen:

Following is a notice of intent to do certain work as described below at the _____

THE OHIO OIL COMPANY C. J. & W. Well No. 1 in NW 1/4 SW 1/4
Company or Operator Lease
of Sec. 17, T. 18 S., R. 28 E., N. M. P. M., Artesia Field,
Eddy County.

FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

Production from this well being uncommercial, 3/8 bbl. oil and 3/8 bbl. water per day, we plan to abandon well and salvage pipe and equipment. Total depth of well 2125' there is 200' of 12 1/2" csg., 321' of 10", 510' of 8 1/2" and 1973' of 6-5/8" casing in the hole - well will be plugged according to the rules and regulations of the State of New Mexico.

DUPLICATE

Approved _____, 19____
except as follows:

A cement plug must be set through the pay; hole filled with heavy mud; to the surface waters; a cement plug set through the surface waters; hole filled with mud to surface and set regulation marker.

OIL CONSERVATION COMMISSION,

By _____

Title _____

THE OHIO OIL COMPANY

Company or Operator

By _____

Position Supt.

Send communications regarding well to

Name THE OHIO OIL COMPANY,

Address P.O. BOX 00,

HOBBS, NEW MEXICO.

THEORY OF THE EARTH

CHAPTER I

OF THE ORIGIN OF THE EARTH

The origin of the earth is a subject which has attracted the attention of philosophers and naturalists from the earliest times. The various theories which have been proposed are numerous, and have been the subject of much controversy. The most ancient theory is that of spontaneous generation, which holds that life originated from non-living matter. This theory is now generally abandoned, and is replaced by the theory of evolution, which holds that life originated from a common ancestor and has since diversified into the various forms which we see today.

The theory of evolution is based on the principle of natural selection, which was first proposed by Charles Darwin. According to this theory, the fittest individuals of a species survive and reproduce, while the less fit individuals are淘汰. This process of natural selection leads to the gradual change of a species over time, and is the basis of the theory of evolution.

The theory of evolution is supported by a large amount of evidence, including the fossil record, the study of comparative anatomy, and the study of the distribution of species. The fossil record shows that many species have become extinct, and that new species have appeared. This is consistent with the theory of evolution, which predicts that species will change over time.

The study of comparative anatomy shows that many species have common features, which are believed to be inherited from a common ancestor. This is also consistent with the theory of evolution, which predicts that species will share common features if they have a common ancestor.

The study of the distribution of species shows that many species are found in the same geographical area, while others are found in different areas. This is also consistent with the theory of evolution, which predicts that species will be found in the same area if they have a common ancestor.

The theory of evolution is a powerful tool for understanding the history of life on earth. It has led to many important discoveries, and has changed our view of the world. It is a theory which is constantly being tested and refined, and it is likely that it will continue to be a subject of interest for many years to come.
