

OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

MISCELLANEOUS REPORTS ON WELLS

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut off, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the Commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below.

REPORT ON BEGINNING DRILLING OPERATIONS		REPORT ON REPAIRING WELL	
REPORT ON RESULT OF SHOOTING OR CHEMICAL TREATMENT OF WELL	X	REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF CASING SHUT-OFF		REPORT ON DEEPENING WELL	
REPORT ON RESULT OF PLUGGING OF WELL			

April 1st, 1948

Date

Abstract: *Chlamydomonas reinhardtii* is a unicellular green alga that has been used as a model organism for studying photosynthesis, cell division, and other cellular processes. This paper describes the growth and reproduction of *C. reinhardtii* under various conditions. The growth of *C. reinhardtii* is highly dependent on the availability of light and carbon dioxide. Under optimal conditions, *C. reinhardtii* can grow rapidly and reach a high cell density. The reproduction of *C. reinhardtii* is also highly dependent on the availability of light and carbon dioxide. Under optimal conditions, *C. reinhardtii* can reproduce rapidly and reach a high cell density. The growth and reproduction of *C. reinhardtii* are also affected by the availability of other nutrients, such as nitrogen and phosphorus. Under optimal conditions, *C. reinhardtii* can grow and reproduce rapidly and reach a high cell density. The growth and reproduction of *C. reinhardtii* are also affected by the availability of other nutrients, such as nitrogen and phosphorus. Under optimal conditions, *C. reinhardtii* can grow and reproduce rapidly and reach a high cell density.
