LOCATE WELL CORRECTLY  
depth

We propose to drill well with drilling equipment as follows: Cable tools to total

The status of a bond for this well in conformance with Rule 39 of the General Rules and Regulations of the Commission is as follows: Blanket Bond on file now.

We propose to use the following strings of casing and to land or cement them as indicated:

| Size of Hole | Size of Casing | Weight Per Foot | New or Second Hand | Depth   | Landed or Cemented | Sacks Cement |
|--------------|----------------|-----------------|--------------------|---|--------------------|--------------|
| 12 1/2"      | 10"            | 40              | New                | 250   | landed             | none         |
| 10-3/4"      | 8"             | 28              | "                  | 425 or sufficient depth to secure water shutoff | cemented           | 50 sacks     |

If changes in the above plan become advisable we will notify you before cementing or landing casing. We estimate that the first productive oil or gas sand should occur at a depth of about 2000 feet.

Additional information: If complete water shut off is secured where 3" pipe is cemented and no further water is encountered to total depth and well is producer, we wish to produce this well without an oil string of pipe
