DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed that the subject well be cleaned out to present total depth of 2664', drilled deeper to top of San Andres which is approximately 2780'. Run Gamma Ray-Neutron and Caliper log. Selectively sand frac the Metex and Premier sands of the Grayburg formation using a formation packer.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
