Well No. 6 is located 990 ft. from N line and 330 ft. from E line of sec. 10  
SE 1/4 of SE 1/4 188 29 1833  
(Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
SE 1/4 of SE 1/4 Reed New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is \_\_\_\_\_ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

We plan to re-enter our Brainard #6 Loco Hills Well formerly completed in Zone 4 and abandoned in 1951. We plan to recomplete this well in Zone 4 for unitization in the West Loco Hills Water Flood Unit.

Our plans are to use a rotary rig to clean out and drill through the pay section. We plan to run electric logs to evaluate the pay zone for Unit participation. Plans are to run new 4 1/2" OD 9.5# casing set on a formation packer shoe between the old 7" casing seat and the top of the shot hole. Plans are to cement the oil string in two stages, cementing from casing packer shoe up the hole approximately 700 feet and from a two stage DV tool at a depth of approximately 1100 feet circulating cement from this tool to the surface to protect the salt section.

Tyler, Texas

Mose

If well is successfully completed  
it will be turned over to Newmont  
under Unit Agreement and new "C-128"  
will be submitted by Newmont
