(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

~~XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX~~

On or about January 25th, we propose to drill a well with cable tools to a depth of 3300 feet unless oil and gas is encountered in commercial quantities at a lesser depth. All casing will be cemented by approved methods of the U.S.A.S. and 8 5/8 inch casing will be set at top of salt and 5 1/2 inch oil string will be set at approximately 2500 feet. The surface casing will be cemented with approximately 50 sack cement, Oil string will be cemented with approximately 100 sack cement.

If no surface water is encountered, we will set 8" and if oil is encountered, we will circulate oil string with cement and recover 6".

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
