(County or Subdivision)

New Mexico

(State or Territory)

The elevation of the derrick floor above sea level is **3569** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I plan to deepen this test well with rotary from its present total depth of 8304 feet to an approximate depth of 10,500 feet in order to test the Pennsylvanian formation.

If production of oil or gas is encountered in commercial quantities a string of 3 1/2" casing will be set through the producing zone.

All casing will be run and cemented under methods approved by the U. S. Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
