### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

it is our intention to drill this well to approximately 2250 ft., running approximately 275 ft. of 10" casing. We desire to run the 10" casing, circulate with mud and aquagel, in case surface water is encountered. There is a possibility of encountering production at 1500 ft., if so we propose to run 1480 ft. of 8" casing, cement and use as production string, and pull 10" casing. If oil is not encountered at 1500 ft., we propose to reduce the hole to 8" and set 7" casing at approximately 2150 ft., in lime and cement as required for production string.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
