(State or Territory)The elevation of the derrick floor above sea level is **3422** ft. **estimated**

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We plan to drill a 2900' San Andres test, using cable tools.

We propose to set 8 5/8" at 400' with 50 sacks.

If production is found, we will run and cement a 5 1/2" oil string.

All casing will be run and cemented using methods approved by the U. S. Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
