**Eddy**

(County or Subdivision)

**New Mexico**

(State or Territory)

The elevation of the derrick floor above sea level is **3443** ft.

**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Wish to drill a well to explore the Red Sand or Queen zone and if this zone proves unproductive, may explore the Grayburg series. The Red Sand should occur at approximately 2100 feet, the deeper zone a maximum of approximately 2750 feet. Intend to run approximately 350 feet of 8 5/8" surface pipe and cement with 25 sacks cement.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
