Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)\*

June 4, 1959 this well was temporarily abandoned at 3594 TD with 7" csg. set at 2925 feet with 30 sacks cement.

The well was re-entered Dec. 1970 and deepened to 3640 feet. 4½" csg. was set at 3640 feet TD with 125 sacks cement. A bond log shows the top of the cement at 2100 feet between the 4½" and 7" csg. The well was acidized and sand water fraced through perforations from 3540 to 3603 feet. The well potentialized pumping 20 barrels oil and 27 barrels load water per day. Production has declined to 3 barrels oil and 20 barrels salty formation water per day. With salt water disposal problems, it is no longer economical to produce the well. Pursuant to telephone conversation with Mr. Knauf we would like to temporarily abandon this well with the idea of possibly using it for a disposal well in the future. The last day of production was May 21, 1971. The rods and tubing will be pulled and the csg. left in hole as it is now.
