30 E

(Range)

(Meridian)

Loose Hills

(Field)

Idaho

(County or Subdivision)

(State or Territory)

The elevation of the derrick floor above sea level is 3330 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Plan to drill to and set approx. 300' of 8 1/8" 28# new seamless casing cementing with 50 sacks cement and 50 sacks mud. After testing for water shutoff plan to drill to the Loose Hills sand at approx 2900'. If the Loose Hills makes oil in commercial quantities will cement 7" O.D. 28# new seamless casing with in a few feet of the sand and will use 100 sacks cement and 100 sacks of mud. If the Loose Hills does not make oil and does make water we will drill through the sand and into the line where we will run and mud the 7" casing. We plan to then drill on to the Lovington at approx. 3600'. If the Lovington makes oil in commercial quantities we will run 5 1/2" O.D. 14# seamless casing with in a few feet of the Lovington and cement with 100 sacks cement and 100 sacks mud. We will then pull the 7" casing and complete the well in the Lovington.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
