Well No. 1 is located 660 ft. from N line and 660 ft. from E line of sec. 18
18 (1/4 Sec. and Sec. No.) 18 S (Twp.) 2 N (Range) T4N (Meridian)
Los Hills (Field) Edy (County or Subdivision) New Mexico (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a 10" hole to the top of the salt where we will set approximately 475' of good second hand 75% lensed 8" casing, cementing with 20 sacks and using Halliburton equipment. We will continue in an 8" hole to a casing spot in the line at approximately 2075' where we will reduce the hole, continuing in a 6-5/8" hole to the top of the pay at approximately 2885'. If oil show is encountered we will then bridge hole and run approximately 2075' of new 7" CD casing and cement with 100 sax. After cement is set and tested we will then drill in and test.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
