Well No. 3 is located 661 ft. from N line and 669 ft. from W line of sec. 22

NW 1/4 NW 1/4 22 18 - S 30 - E NMPM  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Leo Eddy New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is \_\_\_\_\_ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

- To increase production we propose to do the following work:
1. Perforate 5 1/2" O.D. casing from 3230' to 3241', 3218' to 3226', 3200' to 3208', 3121' to 3143', and 3094' to 3108' with 4 jet shots per foot.
  2. Set retrievable bridge plug at 3270'.
  3. Fracture casing perforations from 3094' to 3248' down the 5 1/2" O.D. casing in two equal stages, each of 10,000 gallons of lease crude oil carrying one to two pounds of sand per gallon with 1000 lbs of flaked Naphthalene between stages.
  4. Shut, recover load oil, test, return well to production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
