DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Well was plugged back from 3813' to 3803' with Cal Seal. The well was fraced through 3" tubing with 10,000 gallons lease crude plus 9,000 pounds of sand. Injection rate was 16 bbls per minute and treating pressure was 3400 psi., while 1500 psi. was held on casing. A Lynes packer was set at 3430-40'. A total of 618 bbls of load oil was used for treatment. After recovering all load oil the well was bled and flowed 52 bbls of oil in 24 hours on October 31, 1958.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
