DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On May 20, 1964, an umbrella bridge was placed at 3754' and gravel placed from 3754-3740. Cal Seal was used from 3740-3713. On May 21, after setting a Lynes packer at 3654' on 3" tubing, well was fraced with 500 gals. acid + 5,000 gals. oil + 5,000# sand. Formation broke at 3500 psi. and treated at 3500 psi. at a rate of 12.5 bbls. per minute. No immediate increase in Zone 7 was noted after recovering load fluid. Well has been cleaned out to 3925' and is back on production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
