**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to set approximately 600' of 8-5/8" casing and cement with 100 sacks. We will set approximately 4000' of 5 1/2" casing and cement with 350 sacks. Cable tools will be used to drill to an estimated depth of 4000' to test the Grayburg-San Andres. Completion will be made through perforations.

Authorization for this unorthodox location was granted under New Mexico Oil Conservation Commission Order #R-2135.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
