DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Water channelling is occurring in this well in the 9th zone.

It is proposed to set a magnesium drillable retainer at about 3896' and squeeze below with 100 sacks of cement.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
