Prop - 20881

Pool - 28509

Injection shall be through the three authorized water injection wells, each of which shall be equipped with internally plastic-coated tubing set in a packer. Packers shall be set as near as is practicable to the uppermost perforation, as in the case of the open-hole completion, as near as practicable above the casing shoe. The casing-tubing annulus shall be loaded with a corrosion-inhibited fluid and equipped with a pressure gauge.
