EXTRA COPY

1. The first part of the paper is devoted to the study of the properties of the function $f(x)$ defined by the equation

where α is a real number, $\alpha \neq 0$. It is shown that the function $f(x)$ is periodic with period $2\pi/\alpha$ and that it is continuous at all points except at the points $x = k\pi/\alpha$, where k is an integer. The function is also shown to be differentiable at all points except at the points $x = k\pi/\alpha$, where k is an integer.
