Re: 32 Simon State No. 1,
Unit No. H, Sec. 32-17S-
31E, Eddy County, New
Mexico

Gentlemen:

An inspection of the site of the above-captioned well on January 7, 1961, reveals that the pit has not been filled and the "dead-man" wires not cut. This work must be done before form C-103 (Plugging Report) can be approved.

Please inform this office as soon as the above work has been completed so that we may make final inspection and approve the plugging reports for this well.

Very truly yours,

OIL CONSERVATION COMMISSION

Midland, Texas

Dear Sir:

In inspection of the site of the proposed well on January 7, 1964, it was noted that the site has not been filled and the water table is not known. This work must be done before a well can be drilled. The work must be done before a well can be drilled. The work must be done before a well can be drilled.

It is recommended that the site be filled and the water table be determined before a well is drilled. This will insure that the well is drilled in the correct location and depth. The work must be done before a well can be drilled.

Very truly yours,

J. H. Jones, Jr.
