DETAILS OF WORK

O. C. C.

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mud logging points, and all other important proposed work)

Propose to drill to approximately 1200' to test the San Andres formation. Will set surface pipe on top of the salt (approx. 700') and circulate with mud to surface followed with 50 sa of cement. Will then drill well to total depth. If production is obtained, will set 1 1/2" pipe and circulate mud to surface followed with 150 sa of cement, in order that cement will cover zone to the base of the salt.

Cortez Drilling Co. will be the contractor.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
