Re: Brainard Unit No. 1,  
Unit P, Section 11, T18S,  
R26E, Atoka Penn Field,  
Request for Exemption from  
Back Pressure Test

Dear Sir:

Reference is made to your letter of March 20, 1963.

You may consider this letter as your authority for exception to Rule 401 of the New Mexico Oil Conservation Commission General Rules and Regulations. This exception is being granted mainly because of the wells GOR being in the range of 36,000 to 43,000. If after the well has produced for a few weeks and has cleaned up or the GOR increases somewhat, you will be required to attempt a 4-point back pressure test on the well and report the test to New Mexico Oil Conservation Commission.

Very truly yours,

E. A. UTZ  
Gas Engineer

Bureau of Land Management

Dear Sir:

Reference is made to your letter of March 15, 1963.

You have indicated this letter is being submitted for  
exception to Rule 401 of the New Mexico Oil Conservation  
Commission General Rules and Regulations. This exception  
is being granted mainly because of the well's GOR being  
in the range of 25,000 to 45,000. It should be noted that  
the well has been producing for a few weeks and has a GOR  
of approximately 25,000. You also indicated that the  
well is being tested on the well's GOR. The test is  
being conducted to determine the well's GOR.

Very truly yours,

RECEIVED

Mr. A. J.  
Oil Engineer
