DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a Pennsylvania test with rotary to an approximate depth of 9800 feet. Surface casing, 13", will be run to about 400 feet and cemented with 500 sacks, an amount sufficient to circulate.

An intermediate string, 8 5/8", will be run to approximately 3500 feet and cemented with 250 sacks. If oil or gas is found in commercial quantities, a production string of 4 1/2" or 5 1/2" will be run and cemented with 250 sacks.

All casing run and cemented will be in conformity with methods prescribed by the Geological Survey.

RECEIVED

APR 17 1963

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
