17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

This well was spudded with cable tools, 4-30-71, as the initial test well for the Scoggin Draw Deep Unit, drilled to a total depth of 304' and the hole lost due to encountering excessive water after surface pipe was cemented at 288'. Well was converted to the water supply well for the Scoggin Draw Deep Unit after setting 25' of 10-3/4" slotted liner from 304' to 288'. Water level 135' from surface and water volume estimated at 400 gallons per minute. After completion of the Read & Stevens, Inc. #1-Y Scoggin Draw Deep Unit, this water supply well was temporarily abandoned and a steel plate welded over the casing pending further use as a water supply well for possible subsequent drilling in the area. Enclosed is a copy of our approved application to the State Engineer for conversion of this well to use as a water supply well.
