O.C.C.
ARTERIA. OFFICE

No well will be assigned an allowable greater than the amount of oil produced on the official test.

During a test, if the well produces more than 25 percent of the allowable, the test is invalid and the well must be retested. If the well produces less than 25 percent, the test is valid and the well may be assigned an increased allowable when authorized by the Commission.

Gas volumes must be reported in MCF measured at a pressure base of 15.025 psia and a temperature of 60° F. Specific gravity base will be 0.60.

Report casing pressure in lieu of tubing pressure for any well producing through casing.

Mail original and one copy of this report to the district office of the New Mexico Oil Conservation Commission in accordance with Rule 301 and appropriate pool rules.

I hereby certify that the above information is true and complete to the best of my knowledge and belief.
