

The caliche pit is located 1100 ft from the north section line and 1450 ft from the east section line.

TERRAIN

Areal terrain consists of a level plain shallow soil underlain by indurated caliche.

FLORISTICS

The following plants were noted within the area surveyed: Gutierrezia sarothrae formed the most abundant cover with isolated clumps of Prosopis juliflora.

CULTURAL RESOURCES

No cultural resources were recorded within the survey area.

RECOMMENDATIONS

The Agency of Conservation Archaeology recommends clearance for Amoco's proposed access road, drill pad, and the increased size of the caliche pit.
