Gentlemen:

Recently we have encountered a great deal of confusion and conflict of authority in regard to obtaining approval to repair water flows, particularly where flows occur at the surface. In some instances, approval appeared to come from the state Oil Conservation Division, while in other instances approval was obtained from the BLM. Recently we obtained approval for a procedure from the BLM on Form 9-331. We made preparations to proceed with the work only to find that the New Mexico Oil Conservation Division representative would not approve the procedure. We had pumping equipment and cement on location and the delay caused my client extra expense and time. In the past the state and federal agencies have been furnishing each other copies of these forms, but in this instance the BLM failed to send a copy of their approval form to the state, which caused the conflict.

My clients want to know who has the authority to give final approval on these repair procedures, and we also would like to know what form distribution procedures are being followed by both the BLM and state. Please give us your answer by letter.

Sincerely,

REGISTERED PETROLEUM ENGINEER.
