

9. WELLSITE LAYOUT:

- A. Exhibit C shows the relative location and dimensions of the well pad, reserve pits and major rig components. The pad will be rotated with the pits on the south and the pad and pit area have been staked.

10. PLANS FOR RESTORATION OF THE SURFACE:

- A. After finishing drilling and/or completion operations, all equipment and other material not needed for further operations will be removed. Pits will be filled and the location cleaned of all trash and junk to leave the well-site as pleasant in appearance as possible.
- B. If the proposed well is non-productive, all restoration and/or vegetation requirements of the Bureau of Land Management and United States Geological Survey will be complied with and will be accomplished as quickly as possible. All pits will be filled and leveled within 90 days after abandonment.

11. OTHER INFORMATION:

- A. The surface is federal.
- B. The topography consists of hilly sandy land with catclaw, mesquite and greasewood. Usual inhabitants of this area are rodents, reptiles, coyotes, etc.
- C. No lakes, streams or rivers are in the immediate area however, there is a pond about 3/4 miles from the proposed drillsite.
- D. There are no occupied dwellings or windmills in the immediate area of the wellsite but, there is a ranch house approximately 1 1/2 miles northeast of the proposed location.
- E. There are powerlines about 1/2 miles from our proposed location.
- F. There is no evidence of any archaeological, historical or cultural sites in the area.
