

- C. The reserve pits will be plastic lined.
- D. The pad and pit area has been staked and flagged.

10. PLANS FOR RESTORATION OF THE SURFACE.

- A. After finishing drilling and/or completion operations, all equipment and other material not needed for further operations will be removed. The location will be cleaned of all trash and junk.
- B. Unguarded pits, if any, containing fluids will be fenced until they have been filled.
- C. This location is on Federally owned surface and will be restored as per Federal stipulations covering such restoration.
- D. All pits will be filled and levelled within 90 days after abandonment.

11. OTHER INFORMATION.

- A. Topography: The wellsite is in an area of gentle rises reaching 6-8 feet in height over a lateral distance of several hundred feet.
- B. The topsoil at the wellsite is of a moderate hard sand.
- C. The vegetation cover at the wellsite is of a moderate amount, and consists primarily of prairie grass, mesquite, and miscellaneous weeds and prairie flowers. No wildlife was observed, but it is likely that typical semi-arid desert wildlife, such as rabbits, coyotes, gophers, rodents and snakes inhabit the area. The area is used for cattle grazing.
- D. There is one pond approximately 2.1 miles to the southeast and no other lakes, streams or rivers within several miles of the wellsite.
- E. The nearest occupied dwelling is the Lee Standard residence in the NW/NW Sec. 33-T17S-R29E, approximately 3 miles northeast. There is a windmill approximately 3.5 miles southeast in the SW/4 of Sec. 10-T18S-R29E.
- F. The wellsite is located on Federally owned surface as is the existing and proposed access road.
- G. There is no evidence of any archeological, historical, or cultural sites in the area.

12. OPERATOR'S REPRESENTATIVES.

- A. The field representatives for assuring compliance with the approved surface use plan are:
