

MULTI- LANT SURFACE USE AND OPERATIONS AN

Yates Petroleum Corporation  
Rio Pecos "MH" Federal #1  
Section 29-T18S-R27E  
1980' FSL and 1100' FEL  
(Developmental Well)

RECEIVED

NOV 20 1970

This plan is submitted with Form 9-331C, Application for Permit to Drill, covering the above described well. The purpose of this plan is to describe the location of the proposed well, the proposed construction activities and operations plan, the magnitude of surface disturbance involved, and the procedures to be followed in rehabilitating the surface after completion of the operations, so that a complete appraisal can be made of the environmental effect associated with the operation.

1. EXISTING ROADS.

Exhibit A is a portion of a USGS topographic map showing the wells and roads in the vicinity of the proposed location. The proposed wellsite is located approximately 12 miles SE of Artesia, New Mexico and the access route to the location is indicated in red and green on Exhibit A.

DIRECTIONS:

1. Proceed east from Artesia on Highway 82 for a distance of approximately 12.5 miles.
2. Turn south for approximately 4.65 miles and turn SW for 1 mile; then west across cattleguard, continue west for 2 miles to another cattleguard, keep going west for 1.1 miles to a third cattleguard. The Rio Pecos "KO" location is .2 miles southwest on the road. From "KO" location continue west for 1 mile then turn south for approximately 700'. New road starts here.

2. PLANNED ACCESS ROAD.

- A. The new road will be approximately 950' in length.
- B. The new road will be 12 feet in width (driving surface).
- C. The new road will be covered with caliche, if needed. The surface will be crowned, with drainage on one side.
- D. The new road has been flagged.

3. LOCATION OF EXISTING WELLS.

- A. Drilling activity within a one-mile radius of the wellsite is shown on Exhibit A. The nearest production is a gas well in the NE/4 of Section 28.

4. LOCATION OF EXISTING AND/OR PROPOSED FACILITIES.

- A. There are no gas well facilities on this lease at the present time.
- B. In the event that the well is productive, the necessary production facilities will be installed on the drilling pad. If the well is productive oil, a gas or diesel self-contained unit will be used to provide the necessary power. No power will be required if the well is productive of gas.
