

D. Garbage and trash produced during drilling or completion operations will be collected in a trash trailer by a contractor. No toxic waste or hazardous chemicals will be produced by this operation.

E. After the rig is moved out and the well is either completed or abandoned, all waste materials will be cleaned-up within 90 days. No adverse materials will be left on the location.

8. Ancillary Facilities:

None

9. Well Site Layout:

The drill pad layout will consist of a 200' X 200' pad with the well in the center. This area will be scrapped out of the previous pad area and will not extend beyond the previous pad.

10. Plan for Restoration of the Surface:

A. Upon completion of the proposed operation, if the well is to be abandoned, the entire location will be leveled and contoured to as nearly the original topography as possible.

All trash and garbage hauled away in order to leave the location in an aesthetically pleasing condition.

B. The disturbed area will be revegetated by reseeding during the proper growing season with a seed mixture of native grasses as recommended by the BLM.

11. Surface Ownership:

The surface is Federal and the grazing leasee is Dalton Bell of Artesia, NM.
