

**BLOWOUT PREVENTION PROGRAM
STATE "B" 14 COMM #1**

- 1) BOP to be used on well during recompletion activities will be rated at 5,000 psi and bolted to the 7-¹/₁₆" tubing head.
- 2) BOP will contain pipe rams and blind rams and will be hydraulically operated with secondary manual controls (hand wheel).
- 3) All connections to and from BOP will have a pressure rating of 3,000 psi or greater.
- 4) Controls for BOP will be located a safe distance from the completion rig floor.
- 5) The kill-line for the well will be constructed of 2-⁷/₈" steel pipe with a tee connection long its length. Two (2) 3,000-psi valves will be placed at each opening 90-degree opening to allow the well to either flow to a frac tank or kill the well if it gets out of control.
