

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to determine what consumers are looking for and what problems they are trying to solve. Once a market need has been identified, the next step is to develop a concept for a product that addresses that need.

2. The second step in the process is to develop a business plan. This involves determining the costs of production, the pricing strategy, and the marketing strategy. The business plan also includes a financial forecast and a break-even analysis. Once the business plan has been developed, the next step is to secure funding for the project.

3. The third step in the process is to create a prototype of the product. This involves building a small-scale version of the product that can be used to test the concept and gather feedback from potential customers. Once the prototype has been created, the next step is to conduct a pilot test.

OIL CONSERVATION DIVISION

Drawer DD Artesia, NM.

DISTRICT OFFICE #2

Sept. thru Dec. 1985
