17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

This well was put on pump July 22, 1988 and has been pulled 5 times to date because of frac sand production problems. It is desired to perform a small re-frac pumping only curable resin-coated sand to stop wellbore entry of the Ottawa sand from the original frac job. This well was originally stimulated with a frac job of similar nature to other UTP operated North Shugart field wells in Sections 5 and 6. None of the wells completed to date have had the sever sand production problems experienced in this well although, through further production experience, wells in Section 6 have demonstrated a tendency to produce more frac sand than wells in Section 5.

18. I hereby certify that the foregoing is true and correct
