PROPOSED CASING AND CEMENTING PROGRAM

SIZE OF HOLE	SIZE OF CASING	WEIGHT PER FOOT	SETTING DEPTH	QUANTITY OF CEMENT
12 1/4"	8 5/8"	24# J or K-55	370'	Cement to surface
7 7/8"	5 1/2"	15.5#J or K-55	2900'	Cement to surface

Yates Petroleum Corporation proposes to drill a well for injection of CO₂ into the West Loco Hills Grayburg #4 sand formation. Approximately 370' of surface casing will be set and cement will be circulated to surface. Approximately 2900' of production casing will be run and perforated.

MUD Program: Fresh Water and Native mud to 370'. Brine to TD.

BOP Program: BOP will be installed at the offset and tested daily.

Part ID-1
7-3-92

New loc & API

IN ABOVE SPACE DESCRIBE PROPOSED PROGRAM: If proposal is to deepen or plug back, give data on present productive zone and proposed new productive zone. If proposal is to drill or deepen directionally, give pertinent data on subsurface locations and measured and true vertical depths. Give blowout preventer program, if any.

YATES PETROLEUM CORPORATION

**West Loco Hills Unit Tract #1 Well #10
2455' FSL AND 50' FWL
Section 7-T18S-R30E
Eddy County, New Mexico**

In conjunction with Form 3160-3, Application for Permit to Drill subject well, Yates Petroleum Corporation submits the following ten items of pertinent information in accordance with USGS requirements.

1. The geological surface formation is Sandy Alluvium:
2. The estimated tops of geologic markers are as follows:

Top of Salt	381'
Base of Salt	1,103'
Queen	2,289'
Grayburg #4 Sand	2,799'
3. The estimated depths at which anticipated water, oil or gas formations are expected to be encountered:

Water:	320' - 350'
Oil or Gas:	2800'
4. Proposed Casing Program: See Form 3160-3.
5. Pressure Control Equipment: See Form 3160-3 and Exhibit B.
6. Mud Program: See Form 3160-3.
7. Auxiliary Equipment: Kelly Cock; pit level indicators and flow sensor equipment; sub with full-opening valve on floor, drill pipe connections.
8. Testing, Logging and Coring Program:

Samples: 10' samples from under surface casing to TD.

DST's: As warranted.

Coring: None anticipated.

Logging: GR-CNL, LDT TD to surface pipe. GR-CNL to surface. Cement bond log and casing collar log.
9. No abnormal pressures or temperatures are anticipated.
10. Anticipated starting date: As soon as possible after approval.

MULTI-POINT SURFACE USE AND OPERATIONS PLAN

**Yates Petroleum Corporation
West Loco Hills Unit Tract #1 Well #10
2455' FSL AND 50' FWL
Section 7-T18S-R30E
Eddy County, New Mexico**

This plan is submitted with Form 3160-3, Application for Permit to Drill, covering the above described well. The purpose of this plan is to describe the location of the proposed well, the proposed construction activities and operations plan, the magnitude of the surface disturbance involved and the procedures to be followed in rehabilitating the surface after completion of the operations, so that a complete appraisal can be made of the environmental effect associated with the operations.

1. EXISTING ROADS:

Exhibit A is a portion of BLM map showing the well and roads in the vicinity of the proposed location. The proposed wellsite is located approximately 5 miles southwest of Loco Hills, New Mexico and the access route to the location is indicated in red and green on Exhibit A.

DIRECTIONS:

From Artesia, New Mexico, on Highway 82 travel east to Loco Hills, New Mexico. In Loco Hills turn south on County Road 217 for approximately 2.5 miles to intersection of County Roads 216 and 217. Turn south on County Road 216 for approximately 2 miles to cattle guard on road. Cross cattle guard, continue for approximately 500' to location.

2. PLANNED ACCESS ROAD

- A. The proposed new access will be the existing County Road 216. The road will enter the northwest corner of the location. A temporary re-route will be built to allow more room for men and equipment and to allow traffic to flow safely by the west side of the location. The plan has been approved by the Eddy County road department.
- B. No new access road will be built.
- C. The temporary turnout will be constructed with caliche with drainage on the westside.
- D. The route of the road is visible.

3. LOCATION OF EXISTING WELL

- A. There is drilling activity within one-mile radius of the wellsite.
- B. Exhibit D shows existing wells within a one-mile radius of the proposed wellsite.

4. LOCATION OF EXISTING AND/OR PROPOSED FACILITIES

- A. There are production facilities on this lease at the present time.
- B. This is an injector well. No production of oil or gas is anticipated.

5. LOCATION AND TYPE OF WATER SUPPLY:

- A. It is planned to drill the proposed well with a fresh water system. The water will be obtained from commercial sources and will be hauled to the location by truck over the existing and proposed roads shown in Exhibit A.

6. SOURCE OF CONSTRUCTION MATERIALS:

Contruction materials will be obtained from drillsite's excavations or from a local source.

7. METHODS OF HANDLING WASTE DISPOSAL:

- A. Drill cuttings will be disposed of in the reserve pits.
- B. Drilling fluids will be allowed to evaporate in the reserve pits until the pits are dry.
- C. Water produced during operations will be collected in tanks until hauled to an approved disposal system, or separate disposal application will be submitted.
- D. Oil produced during operations will be stored in tanks until sold.
- E. Current laws and regulations pertaining to the disposal of human waste will be complied with.
- F. Trash, waste paper, garbage and junk will be buried in a separate trash pit and covered with a minimum of 24 inches of dirt. All waste material will be contained to prevent scattering by the wind.
- G. All trash and debris will be buried or removed from the wellsite within 30 days after finishing drilling and/or completion operations.

→ Trash disposal is not permitted on location.

SSS

8. ANCILLARY FACILITIES:

- A. None required.

9. WELLSITE LAYOUT:

- A. Exhibit C shows the relative location and dimensions of the well pad, the reserve pits, the location of the drilling equipment, rig orientation and access road approach.
- B. The reserve pits will be plastic lined.
- C. A 400' x 400' area has been staked and flagged.

10. PLANS FOR RESTORATION

- A. After finishing drilling and/or completion operations, all equipment and other material not needed for further operations will be removed. The location will be cleaned of all trash and junk to leave the wellsite in as aesthetically pleasing a condition as possible.
- B. Unguarded pits, if any, containing fluids will be fenced until they have dried and been levelled.
- C. If the proposed well is non-productive, all rehabilitation and/or vegetation requirements of the Bureau of Land Management will be complied with and will be accomplished as expeditiously as possible. All pits will be filled level within 90 days after abandonment.

11. SURFACE OWNERSHIP: Federal surface administered by the Bureau of Land Management.

12. OTHER INFORMATION:

- A. Topography: Refer to the existing archaeological report for a description of the t

13. OPERATOR'S REPRESENTATIVE

Mr. Cy Cowan, Land Technician
Yates Petroleum Corporation
105 S. 4th Street
Artesia, New Mexico 88210

Dear Mr. Cowan:

In accordance with your request of February 4, 1992 to the Eddy County Board of Commissioners, your request to temporarily re-route CR-216 was approved, providing you put the road back like it originally was, and you obtain the appropriate permit from the U.S. Bureau of Land Management to make such a move.

Road Superintendent Tom Lee will be your county contact on this project. Mr. Lee's telephone number in Carlsbad is 885-4835.

Sincerely,

EDDY COUNTY BOARD OF COMMISSIONERS
