13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

The subject well was approved to drill by Richard Manus on September 22, 1993. The program called for surface casing to be set at 550'. Also, the 11" intermediate hole would be drilled to 3,600' and the 8 5/8" csg would be set and cemented with 800 sx of cement. Due to several wells recently being drilled in the area that had problems in the intermediate section of the hole, Read & Stevens has decided to set the 13 3/8" casing at 600'. The 12 1/4" hole will be drilled to a depth of 4,100'. A string of 9 5/8" csg will then be run to 4,100' and cemented with 1,250 sx of cement. The rest of the drilling plan will remain as approved. This change is necessary and prudent for drilling the subject well. Our spud date is scheduled for Wednesday, October 6, and as of this date the rig is on schedule for movement to our location.
