RE: Dual Completion Request
Dow "B" 28 Fed. #1
Sec. 28-T17S-R31E Unit P
Eddy County, New Mexico

Dear Sir(s)

Texaco Exploration and Producing, Inc. requests permission to dual complete the above captioned well in Eddy County, New Mexico. This well is currently perforated in the Morrow Formation at 11,764'--11,792'. This zone tested at a rate of 350 mcf/d gas & 30 bbls/day oil and no water on a 24 hr. test. It is proposed to produce this Morrow zone up the 5 1/2" casing.

The Mississippi is perforated from 12,118'-12,180' and has a packer set at 12,024'. This zone tested 250 mcf/d and 24 bbls oil and no water on a 24 hr test. Texaco would like to have permission to dual complete this well by producing the Mississippi zone up the 2 7/8 tubing and the Morrow interval up the 5 1/2" casing. Blast joints were run across the Morrow interval to prevent damage to the 2 7/8" tubing. Both zones produce at a low flowing pressure and are well within the limits of the casing and tubing when shut in.

Attached is a wellbore schematic showing the current wellbore configuration. Thank you for your consideration.

Very Truly Yours,

Gene Lee
Agent.
