Devon Energy plans to drill to 2800' +/- to test the San Andres Formation for commercial quantities of oil. If the San Andres is deemed non-commercial, the wellbore will be plugged and abandoned per Federal regulations. Programs to adhere to onshore oil and gas regulations are outlined in the following exhibits and attachments.

Drilling Program Surface Use and Operating Plan Exhibit #1 - Blowout Prevention Equipment Exhibit #1-A - Choke Manifold Exhibit #2 - Location and Elevation Plat Exhibit #3 - Planned Access Roads Exhibit #4 - Wells Within a One Mile Radius Exhibit #5 - Production Facilities Plan Exhibit #6 - Rotary Rig Layout Exhibit #6 - Rotary Rig Layout Exhibit #7 - Casing Design Parameters and Factors Exhibit #8 - H<sub>2</sub>S Operating Plan The undersigned accepts all applicable terms, conditions, stipulation, and restrictions concerning operations conducted on the leased land or portion thereof, as described above.

CONTRACTOR'S OFTION TO FURNISH:

- 1.All equipment and connections above bradenhead or casinghead. Working pressure of prevensers to be 3,000 psi, minimum.
- 2. Automatic accumulator (80 gallen, minimum) capable of cleang 80P in 30 seconds or less and, lighting them closed against full roted working pressure.
- 3.80P controls, to be located near drillers position.
- 4.Kelly equipped with Kelly seck. 5.Inside biswart provvenier or its
- equivalent on derrick laser at all times with proper threads to St. pipe being used.
- E.Kelly saver-sub equipped with rubber casing protector at all times.
- 7.Plug type biswest provenier tester.
- 8.Emira set pipe rame to fit drill pupe in use on incluion at all times.
- S. Type RX rung geakers in piece of Type R.

### MEC TO FURNESH:

z.

- 1.Bradenhead or casinghead and side
- 2. Weer bushing, il required.

### GENERAL NOTES:

- 1. Downshisms from this drawing may be made only with the express permission of MEC's Drilling Manager.
- 2.All assuractions, valves, fittings, piping, etc., subject to well or pump pressure must be funged (subatic clemp connections acceptable) and have minimum meeting pressure equal to relied working pressure of provenses up through others. Valves invet be tul opening and suitable for high pressure mud service.
- 3.Consists to be of standard design and each mixinal, showing aponing and clasing peokles.
- 4. Chance will be positioned so as not to hompor or delay changing of chaice beans. Replaceable parts for adjustable ahere, attor bean store, retainery, and ahere wonches to be annonianity leaned for twinediate use.
- S.AS varies to be equipped with handwheels or bandles ready for immediate use.
- 6. Chase lines must be suitably anchured.

- 7. Hendwheels and extensions to be conrected and ready for use
- 8. Valves adjacent to drilling apool to be held apon. Use outside valves except for emergency.
- All seamless steel cantrel piping (2000 pai working pressure) to have healble jains to avaid stress. House will be primited.
- 18.Cosinghead connections shall not be used except in case of emergency.
- 11.Do not use kill line for routine All-up operations

# Attachment to Exhibit #1 NOTES REGARDING BLOWOUT PREVENTORS Malco "B" Federal #6 Eddy County, New Mexico

- 1. Drilling nipple will be constructed so it can be removed mechanically without the aid of a welder. The minimum internal diameter will equal BOP bore.
- 2. Wear ring will be properly installed in head.
- 3. Blowout preventor and all associated fittings will be in operable condition to withstand a minimum 3000 psi working pressure.
- 4. All fittings will be flanged.
- 5. A full bore safety valve tested to a minimum 3000 psi WP with proper thread connections will be available on the rotary rig floor at all times.
- 6. All choke lines will be anchored to prevent movement.
- 7. All BOP equipment will be equal to or larger in bore than the internal diameter of the last casing string.
- 8. Will maintain a Kelly cock attached to the Kelly.
- 9. Hand wheels and wrenches will be properly installed and tested for safe operation.
- 10. Hydraulic floor control for blowout preventor will be located as near in proximity to driller's controls as possible.
- 11. All BOP equipment will meet API standards and include a minimum 40 gallon accumulator having two independent means of power to initiate closing operation.

#### MINIMUM CHOKE MANIFOLD 3.000, 5.000 and 10,000 PSI Warting Pres

#### 3 MWP - 5 MWP - 10 MWP

# EQUIPMENT SPECIFICATIONS AND INSTALLATION INSTRUCTIONS

- 1. All connections in phone manifold shall be welded, studded, Sanged or Comeron clomp of semperable rating
- 2. All Ranges shall be API 6B or 6BX and ring galikets shall be API FIX or BX. Use only EX for 10 MWP.
- 3. All lines shall be securely anchored.
- Chones shall be equipped with tungston carbide scale and needles, and replacements shall be evaluate.
   Chone manifold pressure and standpipe pressure gauges shall be available at the chube manifold to assist in regulating change. As an element with exemptic change, a change manifold pressure gauge shall be lucated on the rig hour in canjunction with the standpipe pressure gauge.
- aid sheeld be as straight as possible. Lines downstream from thekes shall make 6. Line from drilling speel to anote manif turns by large bands or 50° bands using bull plugged test.

7. Discharge trees trem chakes, shake bypass and from top of ges supersion should vent as for as practical from the well
