17. (If the well is proposed to be used for operations other than those specified in the title, give pertinent details, including proposed work. If well is functionally drilled, give surface locations and measured and true vertical depths for all markers well
relevant to this work.)

This well has been declining in producing capacity and it is our intention to
shut the well in for an extended pressure buildup and then return the well to
production while we analyze the results and determine the proper course of
action.

The well will be shut-in on August 21, 1967.

We will file a subsequent report at the time we return the well to production.
