> Re: Leenard State #2 Unit-N, Sec. 1-195-29E Eddy County, New Mexico

Dear Sirs:

A field inspection of the above described well which is plugged, showed the dry hole marker has not been identified. Said marker must be identified with the unit letter, section, township and range on which the well is located. (See Rule 202)

It was also noted that the three following named wells did not have signs, Leonard State Numbers 1 & 4, and Leonard State "A" #1.

Please read rule 103 as it pertains to signs on producing wells.

Very truly yours.
