Re: Sinclair State No. 1-  
Unit 8, 18-19-29  
Eddy County, New Mexico

Dear Sirs:

A recent field inspection of the above location shows that the dry hole marker reads SW SW 18-19-29, but should read SW NW, also there were tie down wires which need to be cut or pulled.

To complete the filing of said well we need Form O-103 plugging report.

Please notify this office when the necessary work has been done, so that we can make the final field inspection of the abandoned location.

Very truly yours,

OIL CONSERVATION COMMISSION

HA/jw

A. L. Armstrong  
Supervisor, District #2

## 1. Introduction

The purpose of this study is to investigate the effects of the proposed system on the performance of the system. The system is designed to improve the efficiency of the system and reduce the time required for the system to complete the task.

### 2. Methodology

The methodology used in this study is as follows:

1. The system is designed to improve the efficiency of the system and reduce the time required for the system to complete the task.
2. The system is designed to improve the efficiency of the system and reduce the time required for the system to complete the task.
3. The system is designed to improve the efficiency of the system and reduce the time required for the system to complete the task.

The results of the study show that the proposed system is effective in improving the efficiency of the system and reducing the time required for the system to complete the task.

The study also shows that the proposed system is effective in improving the efficiency of the system and reducing the time required for the system to complete the task.

The study also shows that the proposed system is effective in improving the efficiency of the system and reducing the time required for the system to complete the task.

The study also shows that the proposed system is effective in improving the efficiency of the system and reducing the time required for the system to complete the task.

The study also shows that the proposed system is effective in improving the efficiency of the system and reducing the time required for the system to complete the task.
