Malco-Taylor
Well No. 1-B is located 1980 ft. from N line and 1980 ft. from E line of sec. 12

12-3 (Twp.) 12-3 (Range) 12-3 (Section)
North (County or Subdivision) New Mexico (State or Territory)

The elevation of the derrick floor above sea level is 5730 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show size, weights, and lengths of proposed casing, tubing, and other important proposed work)

On June 1, 1949, well was temporarily abandoned at total depth of 1995'. Hole was filled with mud laden fluid. 7" casing pulled. Cement plugs set at 2170-2200 and 1080-1090. Hole filled to top with mud laden fluid and bull plug put in top of 8 5/8" casing. The 8 5/8" casing was left in hole. Slush pits were set filled and everything left in readiness to resume drilling at a later date.

The method of plugging detailed hereon is in compliance with instructions given our field superintendent, Mr. C. H. Haverth, by Mr. Frost.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
