The elevation of the derrick floor above sea level is **3662** ft. **NDB**

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well is presently completed as a Shugart Siluro Devonian Gas Well.
We propose to dually complete the above well in the Wolfcamp formation by:

1. Perforating 9840-44 w/4JFT and cementing to isolate the Wolfcamp formation.
2. Perforate, stimulate, and test Wolfcamp formation 9785-9835.
3. If a Wolfcamp completion is obtained, the Devonian will be produced through 2" tubing landed in a drillable packer set at 12,410' and the Wolfcamp will be produced through 2" tubing at approximately 9860'.

RECEIVED

JAN 3 1961

I understand that this plan of work must receive approval in writing by the Geological Survey before operation.
